OUR VALUED CUSTOMERS

Sedona

We choose SUNFIX's INFOR SunSystems Service, it is the new system to us but it was a fully integrated system. We are able to see considerable improvement on our customer service, inventory visibility and finance management system. Product service and support of SUNFIX project team is very good responsive in timely.As a IT technical team. I am very impressed and highly recommend SUNFIX consulting Myanmar.

AHRN

SUNFIX's ERP system is the absolute best finance and sale record management system platform without doubt! Not only is SUNFIX the best company, it is also very affordable in light of many, many features that it has to offer from all types of industries starting from SME. Before we use SUNFIX's INFOR SunSystems Service, we have a problem which collect data and finance record data. SUNFIX's system is also very ease to use to use and has a great team behind it for support and guidance. I highly recommend SUNFIX's ERP system to anyone who is serious about growing their business through cloud review.

Proven

We have a great experiences with SUNFIX Co.,Ltd . Our management record is more integrity when using SUNFIX services. SUNFIX is really reliable and useful for our business, it can call out report timely. So we can save time and can get definite that daily report data. And also speaking with the service team help me get exactly what I want to do and looking for. I really satisfied using SUNFIX's Acumatica system and want to give highly recommend. Thanks.

INFOR SUNSYSTEMS ACCOUNTING

THE COMPLETE LEDGER ACCOUNTING SYSTEM
MEET CHANGE WITH CONFIDENCE

Traditional financial management systems often lock you into rules, structures, and business models that can't evolve to meet changing needs. It doesn't have to be that way. INFOR SunSystems has the agility to work the way you want, empowering you to meet change with confidence and easily manage business growth.

SunSystems Accounting does this with "smart transactions," which capture detailed data directly at the source and allow you to see performance up close by breaking transactions down to their individual details. Whether the needs of the business change or processes are being revised, new data can be captured whenever it's needed, and analysis can be performed on that data immediately because analytics are built directly into smart transactions.

Rather than maintain separate sub-ledgers (like traditional financial systems), SunSystems uses a unified ledger to hold all financial transactions in a single, integrated transaction set. Fast, easy access to information ensures you'll never be out of balance. General ledger, receivables, and payables are all combined. And you can easily report across all transactions without requiring reconciliation all transactions are posted to the same data set simultaneously.

SUPPORT YOUR DIGITAL TRANSFORMATION

- Infor OS serves as the underlying technology platform of SunSystems Accounting—ensuring that connected systems work together seamlessly
- With a modern, conversational user experience, SunSystems Accounting is intelligent, intuitive, and delivers great value
- Because SunSystems Accounting is cloud enabled, it can react quickly to ever-evolving industry and market changes

Infor Document Management (IDM) stores and retrieves in-context information

SATISFY GLOBAL REQUIREMENTS

SunSystems includes all the functionality needed to effectively manage international growth—enabling organizations to launch into new markets quickly and efficiently. SunSystems is the only financial management solution with this level of comprehensive functionality built in. This functionality includes

SunSystem Module

| IC | Inventory Control |

Add-on

| PR | Purchase Requisition |

| RI | Recurring Invoice |

MULTICOMPANY—INDEPENDENT LOCALES

Multicompany support is standard for most business accounting systems, but SunSystems takes this further with support for configurations of each business as separate localeswithin one deployment. Each configuration can have its own base currency, chart of accounts, and business rules to meet local requirements. Each configuration can have its own independent setup, or multiple companies can be supported within a single business entity.

4D MULTICURRENCY

SunSystems supports four currency dimensions for each transaction: transaction currency (variable), base currency (fixed per business unit), reporting currency (fixed per business unit), and fourth currency (variable). "Variable" means the fourth currency code may vary line by line with the ability to address sophisticated requirements, such as branch accounting in different currencies, tracking values by a charity's donor, or other payment currency (which is distinct from the transaction currency, or the local or corporate accounting currencies).

SMART TRANSACTIONS FOR LOCALIZED REPORTING

SunSystems allows you to define additional data to be captured and stored on all source transactions—as well as refine what data is required for different accounts or types of transaction. For example, for a travel-related expense posting, you may choose to capture the employee code or the destination. You can change the data capture requirements and add new dimensions. Smart transactions allow you to manage additional data requirements that arise from local accounting practices—even when the requirements change.

Multi-tax (withholding, VAT, GST, QST)

SunSystems' tax calculation capability is simple, but flexible. While it doesn't support some complex calculations out of the box, SunSystems can integrate with common taxation platforms and provide automated maintenance of rules and rates.
